Homework

- 1. In Hanoi Tower, explain the process when 5 discs are used (as in p28 of 'DS-Lec02-Recursion').
- Show the pseudo code of Hanoi Tower in an iterative manner, and explain what the complexity is, and how many bars are needed. (Note that the recursion of Hanoi Tower requires 3 bars only.)
- 3. Explain the time complexity of the following equations.

$$T(n) = T\left(\frac{n}{2}\right) + c$$
$$T(n) = 2T\left(\frac{n}{2}\right) + c$$

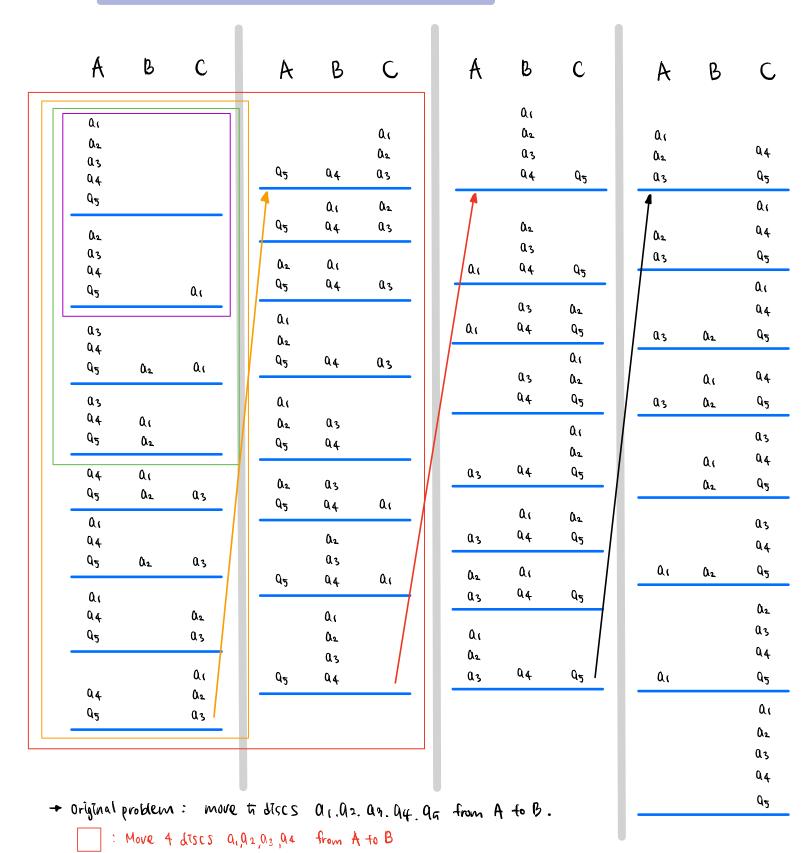

1. In Hanoi Tower, explain the process when 5 discs are used (as in p28 of 'DS-Lec02-Recursion').

: Move y stocs a, a, a, from A to C

: Move 2 discs a, a 2 from A to B

: Move 1 disc a, from A to C

* Hierarchinal Structure of Recursion (Devide-and-Conquer)

2. Show the pseudo code of Hanoi Tower in an iterative manner, and explain what the complexity is, and how many bars are needed.

(Note that the recursion of Hanoi Tower requires 3 bars only.)

Pseudo Code

```
void hanoi-tower (int n) {

Struct bar temp[n-1]; // & N-1744 temp by cu the

if (n==1) { Move a disc from src to dest }

else }

for (i=0; i<n-1; i+t) {

move | disc from src to temp[i]

}

move a disc from src to dest

for (i=n-2; i>=0; i--) {

move | disc from temp[i] to dest

}

2
```

 $(n-1)+1+(n-1) \Rightarrow O(n) = A124253 7 + 21ct.$

Explain the time complexity of the following equations.

$$T(n) = T\left(\frac{n}{2}\right) + c$$

$$T(n) = T(\frac{n}{2}) + C$$

$$T(n) = T(\frac{\alpha}{2}) + C$$

$$T(\frac{\alpha}{2}) = T(\frac{\alpha}{4}) + C$$

$$T\left(\frac{n}{4}\right) = T\left(\frac{n}{8}\right) + C$$

$$\frac{1}{T(n)} = T(\frac{n}{2^{k}}) + C \qquad \qquad \frac{3}{2} \times \frac{3}{2}$$
